Acquisition Research Program:
Creating Synergy for Informed Change

Program-Awareness via Lexical Link Analysis (LLA)

Dr. Ying Zhao, Dr. Shelley P. Gallup, Dr. Douglas J. MacKinnon

Research Associate Professors, Distributed Information Systems
Experimentation, Naval Postgraduate School

Research Questions

Conceptual: 1) Can the information that emerges from the acquisition process be used to produce overall *awareness* of the *fit* between programs/projects/systems and *needs* for which they were intended?. 2) If a higher level of *awareness* is possible, will that enable system level regulation of programs/projects/systems for improvement of the acquisition system?

Focused: 1) Based on the normal evolution of documentation and current data-based program information, can requirements (needs) be connected to system capabilities? 2) Can requirements gaps be revealed?

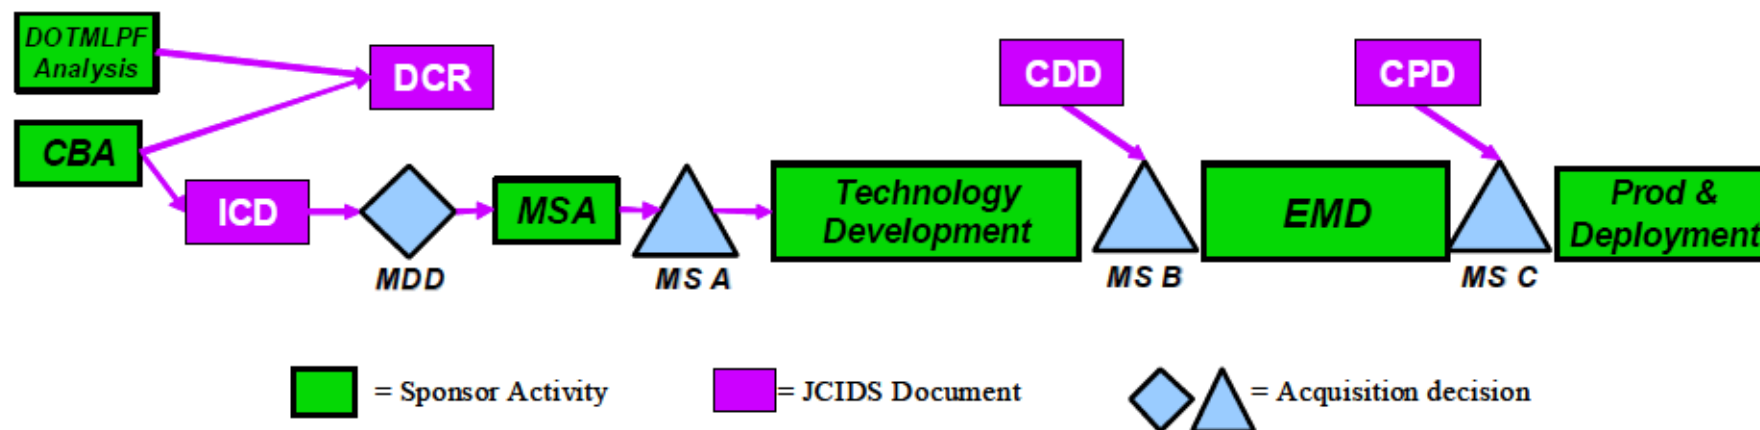

Theory development: Is there a correlation between system interdependency (links/relationships) and development costs?

Methodology: Is it possible to use natural language and other documentation (roughly, unformatted data) to produce visualization of the internal constructs useful for management, through lexical link analysis (LLA)?

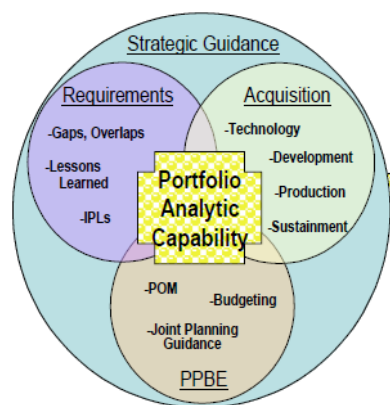

Critical Need: Automation

JCIDS Process and Acquisition Decisions
(From J-8 CJCSI 3170.01G)(JCIDS, 2009)

Multiple Portfolio Views:

- Systems vs. Capabilities
- Investment vs. Capabilities
- System Context
- Highly dependent programs (Joint Enablers)
- Procurement Optimization
- S&T vs. future needs
- Sustainment Efficiency
- Market Value

- Data is too voluminous, unformatted and unstructured!
- Need automation
 - Extract relations among PE, MDAP and ACATII
 - Extract costs

LLA for Analysis of Unstructured Data

- Apply Collaborative Learning Agents
 - Separate patterns and anomalies
 - Parallel computing using NPS High Performance Center (HPC)
- Develop Visualization
 - AutoMap
 - Radar
 - Matrix
- Conduct Pre-processing Steps
 - Named Entity Extraction
 - Leave out people, places and organizations
 - Parts of Speech Tagging
 - Separate nouns, verbs, adjectives, adverbs

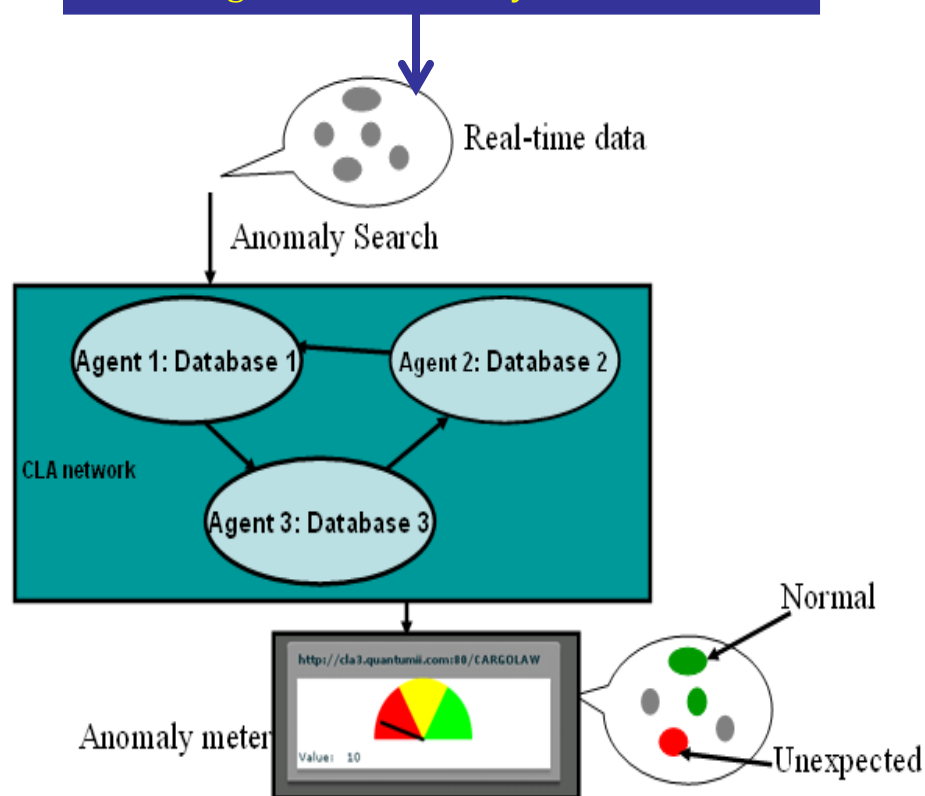

Apply Learning Agents to Perform LLA

A learning agent ingests structured, unstructured, historical or real-time data and separate patterns and anomalies.

Agent collaboration: multiple agents work together for anomaly detection

What is a learning agent?

- A computer program or software
 - Installed in a computer with permission
 - Perform automatic tasks
- Multi-agent, distributed networks are capable of
 - Self-managing (Hinchey et al, 2006)
 - Self-healing (Dashofy et al, 2002)
 - Self-optimizing, self-configuring, self-adapting...
- Our learning agent
 - Related to
 - Reinforcement learning (Sutton 1998)
 - Bayesian belief networks (Pearl, 1986; Ben-Gal, 2007)
 - Hidden Markov Models (Huang 1990)
 - Learning patterns and anomalies

Example

Analysis of Urgent Need Statements (UNS)

- Analyzed three lists of classified needs statements and links to Trident Warrior 10 technology capabilities
 - Navy classified UNS
 - C5F (5th Fleet)
 - Integrated Priority List (IPL)
 - CENTCOM and NAVCENT
- Validity checked by Subject Matter Experts

PE Narrative Justification

UNCLAS

PE NUMBER: 0603421F
PE TITLE: GLOBAL POSITIONING SYSTEM

Exhibit R-2, RDT&E Budget Justification

DATE: February 2007

Program Element

Narrative Justification

04 Advanced Component Development and Prototypes

Cost (\$ in Millions)

FY 2009 Estimate	FY 2010 Estimate	FY 2011 Estimate	FY 2012 Estimate	FY 2013 Estimate	Cost to Complete	Total
868.852	839.868	755.699	642.740	569.885	Continuing	TBD
868.852	839.868	755.699	642.740	569.885	Continuing	TBD

(U) **A. Mission Description and Budget**

Navstar Global Positioning System (GPS) is a space-based radio positioning, navigation, and time (PNT) distribution system. This Program Element (PE) funds the Research and Development (R&D) for GPS III space vehicles (SV) and the next generation Control Segment (OCX). This includes, but is not limited to, advanced concept development, systems engineering and analysis, satellite systems development, the study of augmentation systems, modernized control segment development, user equipment interfaces, training simulators, Integrated Logistics Support (ILS) products, and developmental test resources.

Funds will support engineering studies and analyses, architectural engineering studies, trade studies, systems engineering, system development, test and evaluation efforts, and mission operations in support of upgrades and product improvements for military and civil applications necessary to support efforts to protect U.S. military and allies' use of GPS. Additionally, funds will ensure a disciplined Capability Insertion Program plan to meet Joint Requirements Oversight Council (JROC) approved required capabilities. Funds will support science and technology, technology development and systems development to meet a Block approach (i.e., Block III A, Block III B, etc.).

In the FY07 PB, a restructure of the GPS III program provided funds for the GPS III SV and OCX. The FY08 PB completes the GPS III restructure. Funding for OCX supports an additional Prime Contractor to support OCX concept development, which includes, in addition to GPS III capabilities, the ability to control modernized signals.

This program is Budget Activity 4 - Advanced Component Development and Prototypes because it is in Phase A (Concept Development).

(U) **B. Program Change Summary (\$ in Millions)**

	FY 2006	FY 2007	FY 2008	FY 2009

Exhibit R-2a, RDT&E Project Justification

DATE **May 2009**

BUDGET ACTIVITY		PE NUMBER AND TITLE		PROJECT NUMBER AND TITLE	
05 System Development and Demonstration (SDD)		0604602F Armament/Ordnance Development		5361 Stores-Aircraft Interface	

Cost (\$ in Millions)	FY 2008 Actual	FY 2009 Estimate	FY 2010 Estimate	FY 2011 Estimate	FY 2012 Estimate	FY 2013 Estimate	FY 2014 Estimate	FY 2015 Estimate	Cost to Complete	Total
5361 Stores-Aircraft Interface	0.000	0.000	6.685	0.000	0.000	0.000	0.000	0.000	Continuing	TBD
Quantity of RDT&E Articles	0	0	0	0	0	0	0	0		

In FY 2010, Project 5361, Stores-Aircraft Interface (new), efforts were transferred from PE 0605011F, RDT&E for Aging Aircraft, Project 654685, Universal Armament Interface (UAI), in order to properly fund the maturing technology.

(U) **A. Mission Description and Budget Item Justification**

Universal Armament Interface (UAI) is an Air Force initiative to develop, enhance, and implement standardized interfaces in aircraft, weapons and mission planning to support integration of weapons independent of aircraft Operation Flight Program (OFF) cycles. UAI is currently being implemented on the F-15E and F-16 Block 40/50 aircraft, Small Diameter Bomb (SDB) I and II, Joint Direct Attack Munition (JDAM), Joint Air-to-Surface Stand-off Missile (JASSM) and Precision Guided Munitions Planning Software (PGMPS). Additional aircraft and weapons have program plans to implement UAI. The UAI program office is responsible for development and enhancement of the standard, provision of certification tools (test assets) and implementation support to aircraft and weapons.

The UAI efforts were transferred (1) to ensure continued funding for UAI through the FYDP (PE 0605011F will be zeroed out in FY 2010 due to higher Air Force priorities), and (2) to properly fund the maturing technology. The new project number is established to provide greater visibility into UAI's budget. Funding UAI via the Arm/Ord PE will ensure that platform and weapon program offices have the support required to implement and update UAI.

This program is in Budget Activity 5 - System Development and Demonstration (SDD) because it supports armament integration, an SDD-type activity.

(U) **B. Accomplishments/Planned Program (\$ in Millions)**

	FY 2008	FY 2009	FY 2010
(U) ICD Dev/Updates			5.702
(U) UAI Common Component			0.786
(U) Certification Tool			0.197
(U) Total Cost	0.000	0.000	6.685

This is not a new start; these efforts were performed under PE 0605011F, RDT&E for Aging Aircraft, in FY 2008 and FY 2009.

(U) **C. Other Program Funding Summary (\$ in Millions)**

	FY 2008 Actual	FY 2009 Estimate	FY 2010 Estimate	FY 2011 Estimate	FY 2012 Estimate	FY 2013 Estimate	FY 2014 Estimate	FY 2015 Estimate	Cost to Complete	Total Cost
(U) N/A										

(U) **D. Acquisition Strategy**

In December 2004, under the authority of a class Justification and Approval (J&A), the UAI program office awarded individual Cost Plus Fixed Fee (CPFF) contracts to Boeing, Lockheed-Martin, Northrop-Grumman and Raytheon. These four vendors are the Original Equipment Manufacturers (OEMs) for approximately 90% of the Department of Defense' platforms and weapons. Each OEM is responsible for a different piece of the total UAI requirement based on its platform or weapon expertise.

Exhibit R-2, RDT&E Budget Item Justification: PB 2011 Air Force		DATE: February 2010
APPROPRIATION/BUDGET ACTIVITY		R-1 ITEM NOMENCLATURE
3600: Research, Development, Test & Evaluation, Air Force		PE 0101113F: B-52 SQUADRONS
BA 7: Operational Systems Development		
<p>The B-52 Extremely High Frequency (EHF) will integrate and install the B-52 fleet with assured and survivable two-way EHF SATCOM link for Emergency Action Messages (EAMs) and report-backs to meet Joint Chiefs of Staff (JCS) nuclear protected Information Exchange Requirements (IER). The B-52 EHF will integrate the Family of Advanced Beyond-Line-of-Sight (BLOS) Terminal (FAB-T) Increment 1 system developed and procured by Space and Missile Command (SMC) through PE 0303601F. The FAB-T system consists of the Operator Interface Group, Modem Processor Group, and Antenna Group. The B-52 EHF will integrate the following capability into the CONECT baseline B-52 architecture: a high data rate BLOS communication link supporting IP-based Global Information Grid (GIG) interoperability. The two Multi-function Color Displays (MFCDS) and the additional J-Series Messages that were to be integrated into CONECT with the B-52 EHF have been moved to the Strategic Radar Replacement and CONECT programs, respectfully. In addition, the automated reporting of aircraft fuel level status off-board the jet capability will also be moved from the B-52 EHF. Disposition of this capability is pending an approved acquisition strategy. The B-52 EHF program is planned to be accomplished in three increments. Increment 1 is the up front program planning and risk reduction trade studies on items like radome mounting, environmental cooling system (ECS) capabilities, antenna boresighting, etc. Increment 2 will integrate, and install the FAB-T equipment for strategic connectivity, as well as implement trade study solutions. In addition, the ECS will need to be upgraded or replaced. The ECS modification requirements will allow enough margin to accommodate near-term, future roadmap efforts. Finally, Increment 3 will provide GIG and net ready capability as well as full integration with other B-52 systems.</p>		
Trainers and upgrades for CONECT & EHF		
In order to maintain currency with the latest aircraft configuration, the CONECT and EHF programs will update existing trainers or use computer-based training to add CONECT and EHF functionality to meet user-training requirements and establish a system integration laboratory (SIL) for updates of the Weapon System Trainers (WST).		
Advanced Targeting Pod Functionality		
The B-52 Modernization program fully integrates Advanced Targeting Pods (ATP) by linking pod control, display and target geo-location with the B-52 Offensive Avionics System (OAS). The B-52 ATP effort continues the ATP (Sniper or LITENING) integration effort that began in FY07 with GWOT funding. The ATP effort develops aircraft software updates to add and incorporate advanced pod functionality into the B-52. In addition, this effort upgrades the software functions of the new Alternate Mission Equipment (AME) (Multi Function Display and the Integrated Hand Controller), developed and procured under the B-52 Advanced Weapons Integration (AWI) modification, and enables the B-52 to utilize a LITENING or Sniper pod. This effort provides hardware and software upgrades to the existing aircrew/maintenance trainers and the SIL.		
Weapons Improvements

A-10 AIRCRAFT
Description: The A-10 Thunderbolt was the first aircraft de
support of ground forces and is capable of delivering a ful
munitions as well as self defense air-to-air missiles. It i
can be used against all ground targets, including tanks and
contractor for systems integration is Lockheed Martin.
Mission: The primary mission of the A-10 is to provide day
combat support for land forces. The A-10 has a secondary mi
search and rescue and Special Forces operations. It also pc
capability to perform certain types of interdiction. All of
place in a high or low threat environment.
FY 2008 Program: The FY 2008 budget provides for Precision
wing Replacement modifications.

Results/Conclusions

- Provided an automated tool to surface important aspects among programs
- Proved LLA Validity for automation
 - Adequately models expected human performance but faster
- Demonstrated correlation among relations between programs
 - Cost drivers: Interrelated and Uniqueness
- Discovered statistically significant correlations of Lexical links between MDAP and ACAII, and RDT&E cost

Future Work

- Extract lexical links for applications
 - Continue to explore available acquisition data
 - Extract the cost of MDAP programs (PNO) from the PE documents
 - Compare with SAR (Selected Acquisition Report) as in the MDAP perspective
 - Search for other correlations among other program attributes
 - Identify more dependent variables
 - Diversity metrics
 - Predict program costs using this methodology
 - Cost and cost growth relative to the Milestone B
 - Cascade effect of program costs

Future Work

- Determine methods to leverage the NPS HPC to analyze larger data sets
- Develop improved graphic illustrations of findings
 - 3-D
 - Dynamic
- Provide an automatic LLA service for program self-awareness
 - Enterprise Lexicon Service
 - Meta-Data Registry
- Establish a complex system theory for a cross-domain
 - Law of requisite variety
 - Design Structure Matrix

Acquisition Research Program:
Creating Synergy for Informed Change

Program-Awareness via Lexical Link Analysis (LLA)
